EDUCATION

Toronto Metropolitan University

Sep 2023 – Apr 2027 (Expected)

Bachelor of Science in Computer Science (Dean's List: Fall 2024, Fall 2025, Winter 2026)

Toronto, ON

Relevant Coursework: Database Systems, Data Structures & Algorithms, Algorithms, Computer Networks, Software Engineering, Operating Systems, Computer Security

SKILLS

Languages: Python, SQL, JavaScript, TypeScript, Bash/Shell

Frameworks/Libraries: React, Next.js, FastAPI, Tailwind CSS, pandas, NumPy, scikit-learn, Streamlit

Databases/Backend: PostgreSQL, SQLite, SQLAlchemy, Firebase Authentication, REST APIs

Tools/Platforms: Git/GitHub, Docker, Linux, Postman, Proxmox, Excel

EXPERIENCE

Web Development Intern

Mar 2026 – May 2026

ATJ Consulting Inc.

Toronto, ON

- Built responsive frontend features for a React and Next.js platform, including maps, filters, deal cards, and data-driven UI components.
- Tested frontend changes, debugged user-facing issues, and made updates based on team feedback.
- Improved page layouts, component behavior, and mobile responsiveness to support a smoother user experience.

Software Engineer Intern

Aug 2025 – Nov 2025

Meritrium OmniVentures

Toronto, ON

- Developed backend services and optimized SQL queries for financial reporting, data validation, and transaction workflows.
- Designed normalized relational database schemas to improve data integrity, consistency, and query reliability.
- Traced backend execution flows and performed regression testing to improve platform stability and reduce recurring defects.

IT Intern

Aug 2025

Flowealth Academy

Toronto, ON

- Designed and structured online course modules using standardized templates to improve consistency and usability.
- Organized documentation and content workflows to support version control and team collaboration.
- Improved accessibility and layout of instructional materials through systematic formatting and design updates.

PROJECTS

API Security Analyzer | *Python, FastAPI, React, PostgreSQL*

Apr 2026 – Jul 2026

- Built and deployed a full-stack web application that analyzes REST APIs and generates security findings, risk scores, and remediation recommendations.
- Developed FastAPI backend services, PostgreSQL data storage, authentication, and report management for user-specific scan histories.
- Built a React interface for running scans, reviewing findings, filtering reports, and visualizing security results.

Soul Eater API — *Python, FastAPI, Next.js, PostgreSQL*

Jul 2026

- Built a full-stack REST API and web application for exploring Soul Eater characters, Demon Weapons, abilities, organizations, and story arcs.
- Developed FastAPI endpoints with search, filtering, and resource retrieval across multiple datasets.
- Created a responsive Next.js frontend with interactive API documentation and endpoint examples.

Olympic Performance Analyzer — *Python, pandas, NumPy, Streamlit, Plotly, Altair*

May 2026

- Cleaned and analyzed more than 270,000 Olympic athlete records using Python, pandas, and NumPy to identify trends and build analytical insights.
- Developed data processing pipelines for validation, deduplication, and statistical analysis across large datasets.
- Built an interactive dashboard with visualizations, rankings, historical trends, and country comparisons using Streamlit and Plotly.

TransitBuddy — *React, Flask, Firebase, GTFS-RT*

Jun 2025 – Jul 2025

- Developed backend services to ingest, parse, and transform real-time GTFS-RT feeds into structured API-ready data.
- Designed REST API endpoints with Flask to deliver time-sensitive transit alerts and support client-facing features.
- Integrated Firebase Authentication to manage user-specific alert preferences and secure backend data access.
